PROFESSIONAL SUMMARY

Senior Product Designer and System Designer with almost **5 years** of professional experience working on digital projects with customers and developers. I have worked with different teams from different fields using Agile scrum methodologies. I have a strong background in user experience, UI, and visual design, and being responsible for the whole design process, from gathering information to the final products. I have worked on several projects and helped others in their daily routine, especially in product and solution development and AI enable workflows. I am good at thoughtful design process, clear communication, and a structured way of solving problems and fulfilling the user needs, and business. I am also good at collaborating in agile teams and managing/following the sprints

Core Competencies: UI/UX | wireframes | prototypes | low and high fidelity UI | Figma | Balsamiq | SQL | APIs | Modeling and workflows | Agile and SCRUM | Full design cycle | Interaction design | Collaboration | Communication | Problem solving | Testing | User understanding

WORK EXPERIENCE

AdonisHR (2021 -Present)

System Designer | UX Designer

Focused on the full design cycle from scratch to final product, responsible for the UI/UX low and high fidelity UIs, communicate with customers, product manager and developer to create designs based on business rules and regulations and also get feedback from customers.

- Leading the UX and UI design process for the web based B2B platform.
- Responsible for the system and product design from start to end.
- Work with the developers, customers and create intuitive and responsive interfaces.
- Worked on Figma and Balsamiq to create high and low fidelity UI.
- Follow the internal design process and test and gather user insights.
- Responsible for converting complex workflows into simple structured ones.
- Also manage and collaborate with developers using agile and Jira.
- Present design to users and make consistency and quality high.
- Actively participate in sprint planning and JIRA management.

Teacher Assistant – Oslo Metropolitan University (2021)

- Assist students with their daily coursework and assignments, and review submitted assignments to ensure accuracy and understanding.

Research Assistant – Saarland University, Germany (09.2020 – 11.2020)

- Worked on projects that combined machine learning and conceptual modeling, made analytical tools for health-related systems, and published Scientific Paper. Worked with Chair in Business Administration especially Information and Service Systems. The main task was to research Machine Learning and interact with Conceptual Modeling.

Software Developer – eSmart Systems AS -Halden Norway (05.2019 – 08.2019)

- Connected Drones Project Worked on the autonomous UAV system that checks power line using the deep learning models which helps the company for predictive maintenance.

Teacher Assistant (Computer Engineering Department) -- Østfold University College, Norway (01.2019 – 06.2019)

- Helped teach Software Engineering and Testing classes by showing students how to do real-world software testing and design projects.

Tech Engineering Support Officer – Star Tech Engineering, Pakistan (06.2017 – 06.2018)

- Gave system diagnostics and software management help all the client's networks.
- Resolving Problems with networks and other Computer Systems.
- Diagnosing Systems errors and other issues, installing or Changing software to fix issues.
- Manage Active Directory (AD).
- Remotely accessing hardware or software for clients to make changes and fix problems.

SKILLS

UI & Interaction Design: UX design for complicated problems | Requirement gathering | Problem solving | Strategic approach | Interaction Design | UI design | Work flows | Presentation | Visual design skills | Neat and Consistent design

Design Process: Design life cycle | Project delivery | Work in a structured way | Organized manner | Presenting design solutions | Stakeholders review

Communication & Collaboration: Collaboration with customers | designers | developers | and advisors | Participation in design reviews | Communication of design rationale and trade-offs

Tools & Methods: Figma | Balsamiq | Wireframes | Prototype | Product Design | HTML/CSS | Jira | Confluence | REST APIs | Agile | Cloud based platform

EDUCATION

Master's in applied computer science (AI)– Høgskolen i Østfold - HiØ (2018- 2020)

- The major focus of the dissertation was Machine learning and Computer Vision based System that used different software engineering tools and languages.
- Dissertation: Automatic Data Acquisition of the Power Line Inspection using Autonomous UAVs(drones) on Simulated Environment.
- I have used Deep Learning System. Used Simulated Environment in Unreal Engine
- Training and Testing different Deep Learning Models to perform different tasks.

Bachelor's in computer science government College University, Lahore (2013 - 2017)

- Dissertation: Sanitarium System
- Web based hospital management system. Application was rich in many handy functions such as reporting, billing, and invoicing.

CERTIFICATES

- Cert. Protecting Human Research Participants [National Institutes of Health LICENSE: 2900739]
- Deep Learning with Tensor Flow2.0 [365 Data Science [cert_yft1ph12]]
- Intro to Data and Data Science [365 Data Science [cert_l2fsht21]]
- SQL + Tableau [365 Data Science [cert_Ksmh85yr]]

- Intro to R Programming [365 Data Science [cert_3xt61q72]]
-

PROJECTS

Using autonomous UAVs for automatic data collection for power line inspection (2019)

Created a system for checking power lines with UAV that have deep learning models for taking pictures from every side of the mast. Also focused on making the UAV movement, angle, and speed for full inspections and accurate data.

Analysis and report on the Stability of the Electric Grid Using Machine Learning models (2019)

I used classification methods to check the stability of electric grid datasets by applying different parameters and comparing algorithms.

Develop a CMS website

I have worked on the WordPress management system and worked on both the front and back end of the website.

Creating a System for Analyzing Diabetes patient data

I have worked on a web-based management system with reporting, billing, and automated data visualization dashboards and help in decision making.
